EDUCATION

September 2021 – July 2024

Bachelor's Degree in Computer Science

Abdelhamid Mehri Constantine 2
University

TECHNICAL SKILLS

Programming

Python, JavaScript, SQL, Dart

AI & Machine Learning

PyTorch, TensorFlow, Scikit-learn, NLP,
Deep Learning, Computer Vision

Web & Mobile Development

Flutter, React, FastAPI, Firebase

Data & Tools

Pandas, NumPy, Git, Linux

LANGUAGE

- Arabic : Fluent
- French : Bilingual
- English : Professional Working

RESEARCH & CONFERENCES

Research paper presented at COSI 2026
Research focused on Arabic Sign Language
Recognition using deep learning techniques

LEADERSHIP & ACTIVITIES

- Organizer of an international hackathon BioVatech event
- Active member of TechWaves Club of ENSB Constantine as the leader of It & developement departement
- Involved in organizing technology and innovation events and workshops

AI & Software Engineering Student

ABOUT ME

Artificial Intelligence student passionate about software development, machine learning, and innovation. Experienced in technical projects, platform development, and international academic events. Strong interest in AI applications and emerging technologies.

AI & SOFTWARE PROJECT

June 2024

Dermoscan : Skin Cancer Detection Application

- Developed a computer vision application for AI-based skin cancer detection.
- Implemented image preprocessing and classification workflows.
- Designed a simple interface for image capture and prediction.

December 2024

MLAS : Machine Learning Assistance System for Agoraphobia

- Contributed to the design of a machine learning assistance system for agoraphobic individuals.
- Designed modules for real-time monitoring, preprocessing, and therapeutic feedback.
- Explored the integration of wearable technologies and virtual reality.

April 2025

Captain Trend : Sports Trend Analysis Platform

- Developed a real-time sports trend analysis platform using NLP techniques.
- Implemented sentiment analysis and keyword extraction from social media content.
- Designed dashboards for trend tracking and data visualization.

Sept 2025

Sawtna : AI-Powered Anti-Censorship Platform

- Developed an AI-powered mobile application to help users share sensitive content while reducing censorship risks.
- Built image and text classification pipelines using transformer-based models.
- Implemented automated image filtering and text rewriting workflows.
- Integrated AI image generation APIs within a Flutter application.

May 2026

CNN-BiLSTM-Attention for Arabic Sign Language Recognition

- Developed a deep learning pipeline for Arabic Sign Language recognition using smartphone videos.
- Designed ST-Maps from hand landmarks and motion features extracted with MediaPipe Hands.
- Presented the research at COSI 2026.
